## PERSONAL PROJECTS

University Management System in C++.

- In this we designed -Student management system , College management , Library management , Faculty management with binary input/output file handling

Random password generator in Python

- Its all about how to generate random password using python with minimal number of characters that you have entered and how many lower case, upper case, digits and symbols will be there in your password ...its going to decide by you and generated by the compiler.

Cloudy app in Kotlin

- Its has a simple UI, which monitor the weather according to the current location using openweatherapi and xml framework.

Blog-website-Template - HTML/CSS

- Frontend of my blog website and its still going on , the UI is just made of html and css and uses bootstrap and the backend is yet to learn to perform the authentication and api calling .
